Professional Summary

Third-year Information Technology undergraduate at the University of Moratuwa seeking a Software Engineering Internship. Experienced in software development, including full-stack web and mobile application development through academic and personal projects. Strong interest in artificial intelligence and cloud technologies, with a passion for building practical, scalable, and user-focused software solutions. Eager to continuously learn new technologies, strengthen technical skills, and contribute effectively in collaborative team environments.

Education

University of Moratuwa

Mar 2024 – Present

- BSc(Hons) in Information Technology
- CGPA: 3.6009
- *Relevant Coursework:* Software Engineering | Object Oriented Programming | Database Management | Statistics | Networking | Data Structures & Algorithms

Experience & Volunteering

MoraSpirit Organisation

• Web & Technology Pillar Member

Apr 2025 – Present

- Collaborated in a team on real-world projects, gaining hands-on software development experience solving practical problems
- Contributed to building and maintaining web platforms for the university community

Rotaract Club of University of Moratuwa

- Company Coordinator – Flagship Career Fair (Are You Ready?)

IEEE Women in Engineering (WIE) – University of Moratuwa

- Delegates Committee Member – Hackelite 2.0

Certificates & Achievements

- Python Programming Course (UoM – Open Learning Platform)
- Web Design for Beginners (UoM – Open Learning Platform)
- Hackathon Participant – MoraXtreme 10.0 (University of Moratuwa)
- Hackathon Participant – JapuraXtreme 2.0 (University of Sri Jayewardenepura)

Notable Projects

Unify – University Social & Learning Web Platform

Oct 2025 – Aug 2026

React.js, Node.js, Express.js, PostgreSQL, Sequelize ORM, Tailwind CSS, Docker, AWS

[GitHub](#) | [Live Demo](#)

- Developed an aggregated multi-role campus News Feed with pagination and interaction features (likes, comments, saves) using React.js, Node.js, and PostgreSQL
- Built an automated Lost & Found matching pipeline implementing a vectorized TF-IDF algorithm and Cosine Similarity to calculate text overlap (≥ 0.65 score) and pair lost/found reports automatically
- Engineered an end-to-end user Notification Center, storing relational triggers in PostgreSQL and routing real-time redirect actions directly to matching posts and items
- Authored domain UML diagrams (Use Case, Activity, Sequence, Class), designed responsive Figma UI com-

ponents, and performed automated integration/unit testing across backend services

Epilogue Quiz – Interactive Competition Platform

Jun 2026 – Jul 2026

Next.js, TypeScript, React, Tailwind CSS, Prisma, MySQL, JWT

[GitHub](#) | [Live Demo](#)

- Built authentication workflows and responsive landing pages for a live, level-based competition web app (MoraSpirit), attracting **300+ registered users**
- Implemented the database tier using Prisma ORM and MySQL, managing user records and index-based authorization
- Engineered a real-time leaderboard with Redis and optimized SQL queries to track live player rankings under concurrent loads

Green Cycle LK – AI-Powered Waste Management & Recycling Platform

Sep 2026 – Present

React 18, TypeScript, Spring Boot 3, Java 17, Python, PostgreSQL, JWT, Docker

- Developing the Smart Recycling & Citizen Management module, including JWT-based authentication, resident dashboard, user profiles, collection schedules, and recycling guidance
- Building the AI waste identification workflow, integrating image-based waste classification with disposal guidance through the project's AI service
- Implementing a searchable waste database and recycling guide covering multiple waste categories and providing item-specific disposal instructions
- Developing module-level frontend, backend APIs, and database components, while contributing to shared testing, Docker deployment, Git/GitHub workflows, and cross-module integration

SortMaster – Automated QR-Based Object Sorting System

Aug 2024 – Aug 2025

Python, OpenCV, Pyzbar, Raspberry Pi 4B, Arduino Uno, EasyEDA, Web App

- Engineered an automated sorting system using OpenCV and Pyzbar for real-time QR detection and 6-DOF robotic arm pick-and-place operations
- Designed a custom PCB in EasyEDA and integrated motor controllers (A4988, PWM I²C) via Raspberry Pi 4B and Arduino Uno
- Developed a live web dashboard to stream and monitor real-time category-wise sorting metrics

Technical Skills

- **Languages:** Java, JavaScript, TypeScript, Python, C
- **Frontend:** React, HTML, Tailwind CSS, NEXT.js, Bootstrap
- **Backend:** Node.js, Next.js, REST APIs, FastAPI, Spring Boot
- **Databases:** PostgreSQL, MySQL, MongoDB, Sequelize ORM
- **DevOps & Cloud:** Git, GitHub, AWS, Docker
- **Tools:** Postman, ClickUp, Figma, Canva
